Salt water operation - how will Milo™ perform in salt water?

Team - 2023-06-05 - Product FAQs

Milo™ has very few moving parts outside of sealed buttons. In the same way you take care of, say, an action camera, we recommend rinsing with fresh water after use in salt water, so with care you will not have any problems. We also include a set of rubber plugs that fit into the USB-C port for added convenience.
